

Completed vs planned evidence

Strong enough for PPT, but the evidence tier stays honest: some pieces are done, others are planned.

Completed now

- candidate gallery figure
- main no-memory vs memory comparison
- memory cost analysis
- manual review packet
- presentation figure pack

Limited / honest

- external reranking only
- single-case road-sign evidence
- controls are not perfect
- no claim of internal model change
- no new training or checkpoint modifications

Planned next

- dynamic memory
- internal conditioning
- human-reviewed labels
- stronger multi-scene validation
- broader candidate pool if available

This separation keeps the story credible: some evidence is done, some is limited, and some should stay on the roadmap.
