

Claims and limitations

PPT-safe wording: state what the evidence supports, and state clearly what it does not support.

Supported claims

- External memory changes the selected continuation.
- The candidate pool stays frozen; only reranking changes.
- The package uses real model outputs and real control tables.
- The memory bank is small, inspectable, and easy to audit.

Not supported

- This is case-study evidence, not a broad benchmark claim.
- The mechanism is external reranking, not internal conditioning.
- The controls still leave some distractors competitive.
- No claim of improved training or changed model weights.

Use the green side as the claim, and the red side as the limitation. That keeps the final narrative honest.
